This book features the best of those, allowing any rider to become their own mechanic and save money. Suspension: A bike's suspension is vital, expensive to fix, and tricky to diagnose. If there's one thing off-road riders crave, it's the ability and know-how to do this maintenance themselves. This special section delivers with clear, detailed but quick-to-grasp, tips from America's top race-bike mechanics; this section alone could save a rider thousands of dollars. Whether you enjoy trail-riding and exploring the backcountry, aspiring to motocross stardom, wondering how they do those amazing freestyle flips, this book is packed with hands-on, off-road tips and tricks to get you there - and keep you moving.

Suspension is probably the most misunderstood aspect of motorcycle performance. This book, by America's premier suspension specialist, makes the art and science of suspension tuning accessible to professional and backyard motorcycle mechanics alike. Based on Paul Thede's wildly popular Race Tech Suspension Seminars, this step-by-step guide shows anyone how to make their bike, or their kid's, handle like a pro's. Thede gives a clear account of the three forces of suspension that you must understand to make accurate assessments of your suspension's condition. He outlines testing procedures that will help you gauge how well you're improving your suspension, along with your riding. And, if you're inclined to perfect your bike's handling, he even explains the black art of chassis geometry. Finally, step-by-step photos of suspension disassembly and assembly help you rebuild your forks and shocks for optimum performance. The book even provides detailed troubleshooting guides for dirt, street, and supermoto--promising a solution to virtually any handling problem.

Revised and fully updated, the second edition of this graduate textbook offers a comprehensive explanation of the technology and physics of LEDs such as infrared, visible-spectrum, ultraviolet, and white LEDs made from III-V semiconductors. Elementary properties such as electrical and optical characteristics are reviewed, followed by the analysis of advanced device structures. With nine additional chapters, the treatment of LEDs has been vastly expanded, including new material on device packaging, reflectors, UV LEDs, III-V nitride materials, solid-state sources for illumination applications, and junction temperature. Radiative and non-radiative recombination dynamics, methods for improving light extraction, high-efficiency and high-power device designs, white-light emitters with wavelength-converting phosphor materials, optical reflectors, and spontaneous recombination in resonant-cavity structures are discussed in detail. With exercises, solutions, and illustrative examples, this textbook will be of interest to scientists and engineers working on LEDs and graduate students in electrical engineering, applied physics, and materials science.

Barry says " I teach people how to heal their anxiety so they can get back to living their life again to the fullest."

American Literature and American Identity addresses the crucial issue of identity formation, especially national identity, in influential works of American literature. Patrick Colm Hogan uses techniques of cognitive and affective science to examine the complex and often highly ambivalent treatment of American identity in works by Melville, Cooper, Sedgwick, Apess, Stowe, Jacobs, Douglass, Hawthorne, Poe, and Judith Sargeant Murray. Hogan focuses

on the issue of how authors imagined American identity—specifically, as universal, democratic egalitarianism—in the face of the nation's clear and often brutal inequalities of race and sex. In the course of this study, Hogan advances our understanding of nationalism in general, American identity in particular, and the widely read literary works he examines.

With the same-sex "marriage" debate heating up all across the country, the American Society for the Defense of Tradition, Family and Property (TFP) is entering into the cultural fray with a compelling new book which clearly spells out why pro-family America must react. The new TFP work is titled *Defending a Higher Law: Why We Must Resist Same-Sex "Marriage" and the Homosexual Movement*. Written by TFP's Committee on American Issues, the 212-page book is a much needed defense of traditional marriage based on Catholic tradition and natural law. It is a powerful and incisive attack on the myths buttressing homosexual agenda.
