This book steers buyers through the the confusion and anxiety of new and used vehicle purchases unlike any other car-and-truck book on the market. "Dr. Phil," Canada's best-known automotive expert for more than forty-five years, pulls no punches.

Governments of many countries consider the electrification of individual passenger transport as a suitable strategy to decrease oil dependency and reduce transport-related carbon dioxide (CO2) and air pollutant emissions. However, battery-electric vehicles (BEVs) and plug-in hybrid-electric vehicles (PHEVs) have been more expensive than their conventional counterparts and suffer from relatively short electric driving ranges, which still hampers the market potential of these vehicles. Despite persisting shortfalls, mechanisms such as technological learning and economics of scale promise to improve the techno-economic performance of BEVs and PHEVs in the short- to mid-term. Here, the author seeks to obtain insight into the techno-economic prospects of BEVs and PHEVs by: (i) establishing experience curves and (ii) quantifying user costs and the costs of mitigating carbon dioxide and air pollutant emissions in a time-series analysis. The analysis captures the situation in Germany between 2010 and 2016.

Steers buyers through the the confusion and anxiety of new and used vehicle purchases like no other car-and-truck book on the market. "Dr. Phil," along with George Iry and the Editors of the Automobile Protection Association, pull no punches.

This book connects business sustainability to supply network-based value creation and enhancement, and tests a number of key propositions in complex supply networks to identify key challenges. Examining practical issues such as carbon trading, green product development, worker safety, child labour and relations with local communities, Business Value and Sustainability advances the understanding of sustainability in supply network management. In presenting a supply management perspective including a tighter control of the supply base and the development of supplier capability through collaboration with NGOs, the authors contribute to both the theoretical advancement and practical development of this field. The book aims to raise the sustainability standards of businesses in an increasingly complex and inter- and intra-connected global supply network.
