Artificial neural networks (ANNs), usually simply called neural networks (NNs), are computing systems vaguely inspired by the biological neural networks that constitute animal brains. An ANN is based on a collection of connected units or nodes called artificial neurons, which loosely model the neurons in a biological brain.

Artificial intelligence (AI) develops programmed agents (systems) that match or outperform people's abilities to make decisions, to learn, and to plan. To do so, AI develops algorithms and methodologies that sense a system's environment, decide what to do given that data, and effect its chosen actions in its environment.
