Biophilic Design is an exploration of how we cut ourselves off from nature in the way we design the buildings and neighborhoods where we live and work. And it's an argument for re-connecting these spaces to the natural world, with plenty of windows, daylight, fresh air, plants and green spaces, natural materials, and decorative motifs from the natural world."

Biophilic Design: The Theory, Science and Practice of ...

Biophilic design is a concept used within the building industry to increase occupant connectivity to the natural environment through the use of direct nature, indirect nature, and space and place conditions. Used at both the building and city-scale, it is argued that this idea has health, environmental, and economic benefits for building occupants and urban environments, with few drawbacks.
