We like the stainless steel exterior, and their customer service has been very good. We also wired in a master cut-out switch, and note this is a 240V installation. We're using a 6kW Mr Steam 150E generator. It's important to size your steam generator appropriate to the cubic foot size of the steam room.

The steam generators are vertical U-tube heat exchangers with peerless type steam dryers, moisture separators, and an integral economizer in which heat is transferred from the reactor coolant to the main steam and feedwater system. A major improved feature incorporated into the steam generator design is the

Steam Generators | Clayton valves, conserving steam and water usage. Sterilizer utilities can be restarted either by programmed time or manual operation. A different shutdown and restart time can be programmed for each day. One-piece heat-conserving insulation sleeve is fitted around exterior of the sterilizer vessel. The sleeve is sealed and held

of boiling water to make steam.

Thermodynamically, the heat energy used results in a change of phase from liquid to gaseous state, i.e. from water to steam. A steam generating system has to provide a continuous and uninterrupted heat source for this conversion.

We have the broadest product line in the industry, with sizes that range from as low as 200 lbs./hr. (90 kg./hr.) to 14,000 lbs./hr. (6,350 kg./hr.) of pure steam. MECO pure steam generators are designed in accordance with cGMP requirements. Each generator is equipped with the PID loop controls necessary for stable operation.
