## Geometry By Construction

Interactive geometry software (IGS) or dynamic geometry environments (DGEs) are computer programs which allow one to create and then manipulate geometric constructions, primarily in plane geometry. In most IGS, one starts construction by putting a few points and using them to define

Geometry By Construction

new objects such as lines, circles or other points. After some construction is done, one can move the points one started with and see how the construction changes.

## Geometry By Construction

With emphases on constructions and proofs, the reader is encouraged to create the objects under investigation and verify the results with reasoning.

Since both models of "bent" spaces exist in Euclidean geometry, the reader gains facility with Euclidean moves through the whole book, even
