Heat pump troubleshooting tips for winter icing: The unit is not defrosting. Under normal conditions, your heat pump periodically switches to air conditioning mode for a few minutes, which heats up the outdoor coils enough to melt any frost and light ice that has accumulated. If the unit is not defrosting, ice can build up in a hurry.

Heat Pump Troubleshooting: 3 Common Problems and Solutions

Heat pumps vary in the number of stages or speeds they offer. Different speeds, or stages, can affect your comfort and the consistency of indoor temperature. The most basic is a single-stage heat pump, with airflow on or off, which can cause fluctuations to your indoor temperature and comfort. Two-stage models offer high- and low-stage heating and cooling to more efficiently heat or cool your space when outdoor weather changes to very cold or very hot conditions.

Heat Pumps | Heat & Cool Your Home | Carrier Residential

Broken reversing valve: As the name suggests, the reversing valve allows the heat pump to work as both a heater and an air conditioner by reversing the direction of the refrigerant. If the heat pump turns on when you want cool air, but not for heat, this is likely the cause. It will also need to be replaced by a technician. Heat pump not heating

When you combine a compatible Lennox heat pump with an efficient Lennox furnace, you can create an energy-saving dual-fuel system. The heat pump functions as both a heating and cooling system, reducing gas fuel consumption. On extra-cold days, the gas furnace becomes the primary heat source, ensuring maximum comfort is maintained.
