Systems Thinking: Managing Chaos and Complexity

Description. Although chaos theory refers to the existence between seemingly random events, it has been gaining the attention of science, technology and managements fields. The shift from traditional procedures to the dynamics of chaos and complexity theory has resulted in a new element of complexity thinking, allowing for a greater capability for analyzing and understanding key business processes.

Chaos and Complexity Theory for Management: Nonlinear ...

The business landscape of the 21 st Century is characterized by increasing complexity, disorder, intense competition, hyper speed pace of change, and above all, a 24/7 “always on” culture. This means that chaos is inevitable in such a landscape because of the confluence of all these factors. Therefore, managers and leaders cannot but learn to manage chaos and embrace complexity if they and their organizations have to prosper and indeed, even survive.

Managing in Chaos: A Necessary Skill for Managers and Leaders

It is also a platform that could be used to integrate the iterative approach, systems dynamics, and the challenge of self organization of sociocultural systems (neg-entropic process) into a comprehensive systems methodology. Systems Thinking: Complexity

The point to emphasize is that the interaction of counteracting feedback loops - the prime source for generating chaos and complexity - is a common phenomenon in our daily life. Understanding these dynamics is the key to getting a handle on the notion of complexity, interdependency and counter-intuitive behavior of social systems.

A Simple Approach To Managing Complexity

Where traditional leaders strive to eliminate chaos and reduce uncertainty, complexity leaders thrive in chaos and absorb uncertainty. Although there appears to be tension between these two leadership types, Uhl-Bien contends that they can co-exist within healthcare organizations. Similar to aligning responses to uncertainty with level of uncertainty, different types of leadership may be required for different objectives and functions of the organization.
