Nasa Post Apollo Lunar Exploration

Here is what I posted two weeks ago: The Apollo Moon program was stopped by the U.S. Congress after the Apollo 17 mission. NASA's total budget was cut and the remaining program of human flights was redirected toward the less expensive Apollo-Soyuz join flight with the USSR, the three Skylab missions (the first space station), and eventually the Space Shuttle and International Space Station.

Post Apollo Lunar Missions | Solar System Exploration ...

NASA and the U.S. Department of Energy will seek proposals from industry to build a nuclear power plant on the moon and Mars to support its long-term exploration plans. The proposal is for a ...

Why NASA wants to put a nuclear power plant on the moon

But it took space-age exploration to show us how the moon is connected to human

The physical exploration of the Moon began when Luna 2, a space probe launched by the Soviet Union, made an impact on the surface of the Moon on September 14, 1959. Prior to that the only available means of exploration had been observation from Earth. The invention of the optical telescope brought about the first leap in the quality of lunar observations.

NASA Post-Apollo Lunar Exploration Plans: Moonlab Study ...

The Apollo 12 spacecraft was struck by lightning twice just after launch, temporarily knocking out electrical power and telemetry – but this didn't stop a successful mission. The goals of Apollo 12 focused on science, including investigating the lunar surface environment, emplacing the first Apollo Lunar Surface Experiments Package (ALSEP), obtaining samples from a second lunar mare and enhancing the capability for human lunar exploration.
