Flange joints are torque tight with the help of a torque wrench (Manual or hydronic wrench). The clamp load produced during tightening is higher than 75% of the fastener's proof load. To achieve the benefits of the pre-loading, the clamping force in the screw must be higher than the joint separation load.

Flange Bolt-Up Bolting Torque Table 1 - wermac.org

This is due to the fact that API flanges typically operate at a higher pressure in comparison to their ANSI/ASME flange counterparts. The seal of an RTJ gasket occurs under the force of closing the bolt and hardware after mating one flange to
