Software-defined radio is a radio communication system where components that have been traditionally implemented in hardware are instead implemented by means of software on a personal computer or embedded system. While the concept of SDR is not new, the rapidly evolving capabilities of digital electronics render practical many processes which were once only theoretically possible. A basic SDR system may consist of a personal computer equipped with a sound card, or other

~~Software defined radio — Wikipedia~~

0.2.2 Software-Defined Radio and Cognitive Radio. Software-defined and cognitive radio are important emerging technologies in wireless communications [48]. In a software-defined radio (SDR), some of the radio functions typically implemented in hardware are converted into software [69]. By providing smart processing to SDRs, cognitive radio (CR) will provide the flexibility needed to more efficiently use the radio frequency spectrum and to make available new

services to users.

~~Software Defined Radio — an overview |  
ScienceDirect Topics~~

The underlying architecture needed to achieve this is often termed software-defined radio (SDR). SDR is heralded by some as a significant step in the evolution of radio. In the future this flexibility might enable the more efficient use of the available spectrum through rapid deployment of the latest radio technologies.
