What is Statistical Process Control? SPC Quality Tools | ASQ
What is Statistical Process Control (SPC) SPC is method of measuring and controlling quality by monitoring the manufacturing process. Quality data is collected in the form of product or process measurements or readings from various machines or instrumentation. The data is collected and used to evaluate, monitor and control a process.

Statistical Process Control

Statistical process control (SPC)

is a method quality control which employs statistical methods to monitor and control a process.

This helps to ensure that the process operates efficiently, producing more specification-conforming products with less waste (rework or scrap). SPC can be applied to any process where the "conforming product" (product meeting specifications) output can be measured.

NHS Improvement

Statistical process control (SPC) is a scientific, data-driven methodology for monitoring, controlling and improving procedures and products. This industry-standard quality control (QC) method entails gathering information about a product or process on a near real-time basis so that steps can be taken to ensure the process remains under control.

The concept of quality control in manufacturing was first advanced by Walter Shewhart. The first to apply the newly discovered statistical methods to the problem of quality control was Walter A. Shewhart of the Bell Telephone Laboratories. He issued a memorandum on May 16, 1924 that featured a sketch of a modern control chart.

Statistical process control quality (or SPC for short) is considered the industry standard when it comes to measuring and controlling quality during your production runs. SPC manufacturing comes in the form of gathering data on your products or processes in real-time using a graph with pre-determined control limits to measure its efficiency.

Statistical Quality Control - Definition, Objectives & Tools
Statistical Process Control (SPC) is used for the purposes of process qualification, problem solving, process monitoring, and continual improvement. SPC is applicable to a wide range of process situations, where data is used to understand and manage the performance of manufacturing and non-manufacturing processes.
